## De-rating Curve:

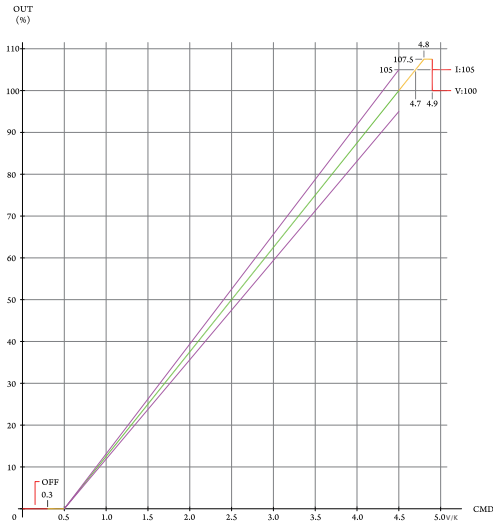

## Efficiency Curve (400V Model):

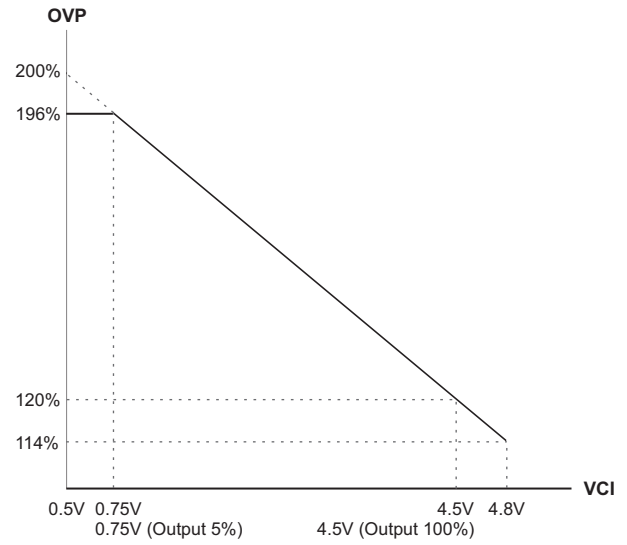

### LOAD

The curve above is measured at 230Vac  
 (Ambient temperature @ 25°C)

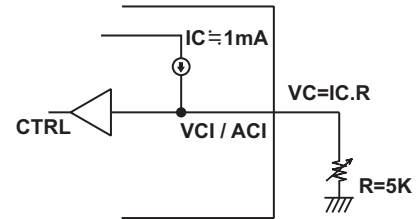

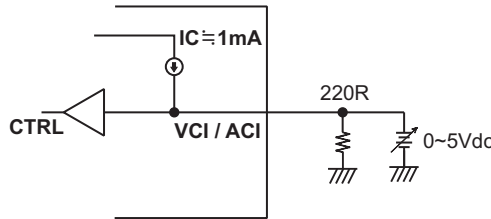

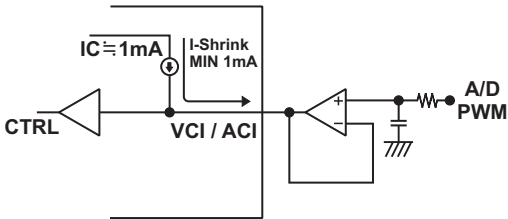

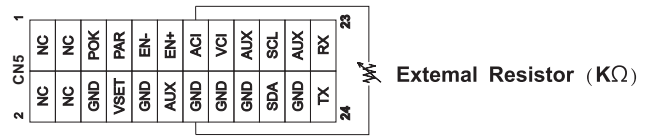

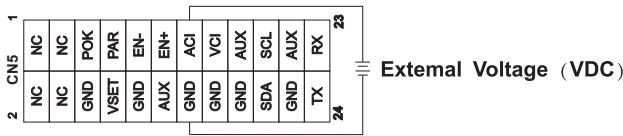

## CMD VS Output Curve:

## VCI VS OVP Curve:

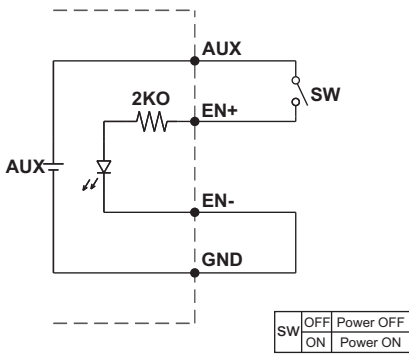

To ensure the power supply output voltage and current could be accurately adjusted, please make sure to adjust the output voltage and current > 10% vs. the rated voltage and current. (e.g. for a 300V unit, please adjust the DC output voltage above 30V to ensure accuracy; same applies to the output current)

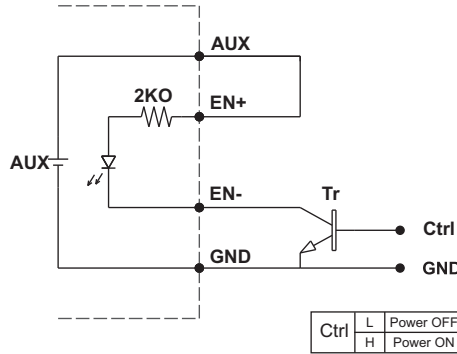

## Remote ON/OFF:

(A) Using internal 5V auxiliary source

(B)

(B) ON / OFF Control by NPN transistor

(C)

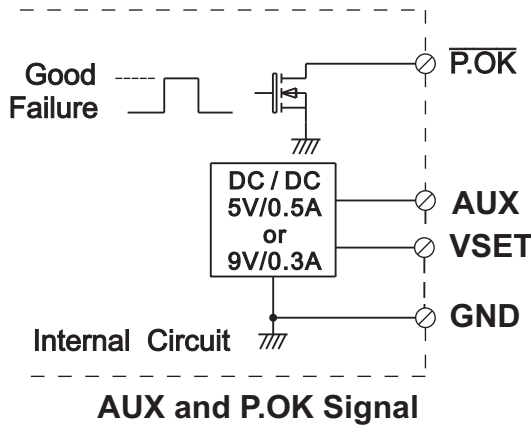

(C) Using external voltage source

\*GND shown in above diagram is referring to the GND of CN2, not the Grounding from main power(NEG-).\*

## Power OK Signal & Auxiliary Power Setting:

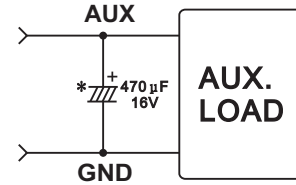

\*The grounding of "AUX" power and P.OK signal should be connected to "GND" port. If "VO-" is connected as Grounding, make sure to short the GND and VO- ports.

Open drain signal low when PSU turns on, Max. P.OK sink current: 20mA, Max. drain voltage: 40V.

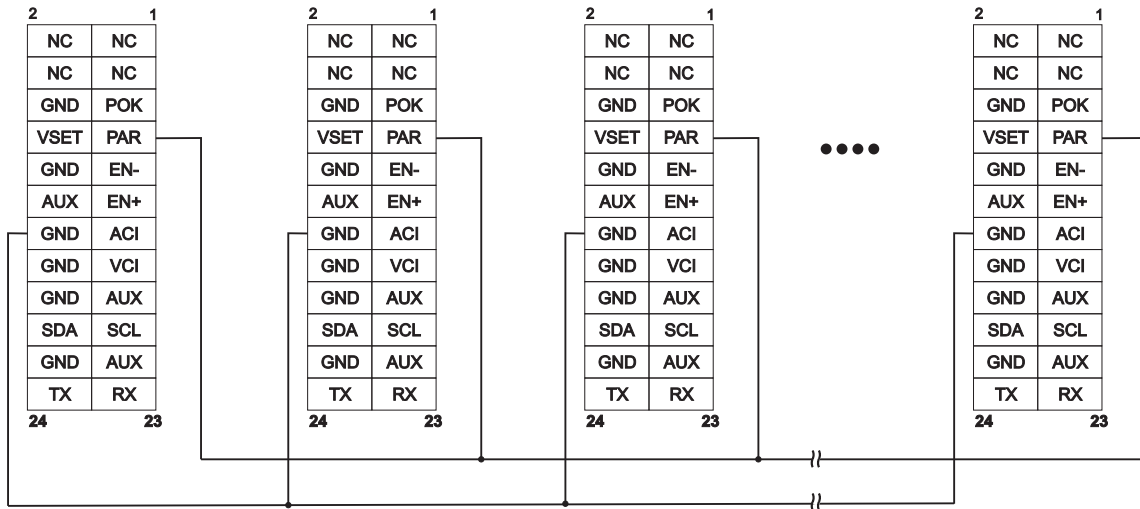

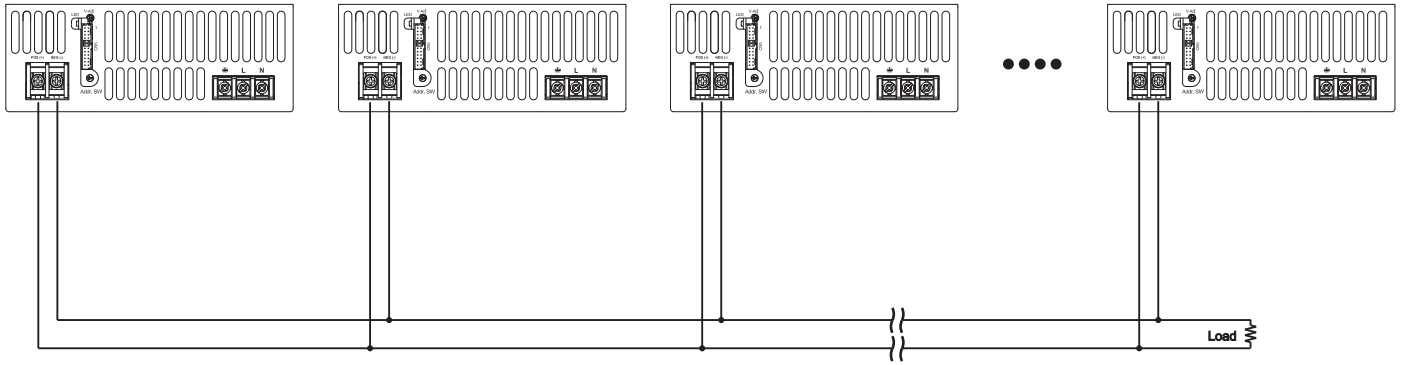

\*GND shown in above diagram is referring to the GND of CN2, not the Grounding from main power(NEG-).\*

\*Place an additional capacitor to have a better performance of auxiliary power operation.

Do NOT exceed 5V/0.5A or 9V/0.3A

## 1. Current Sharing

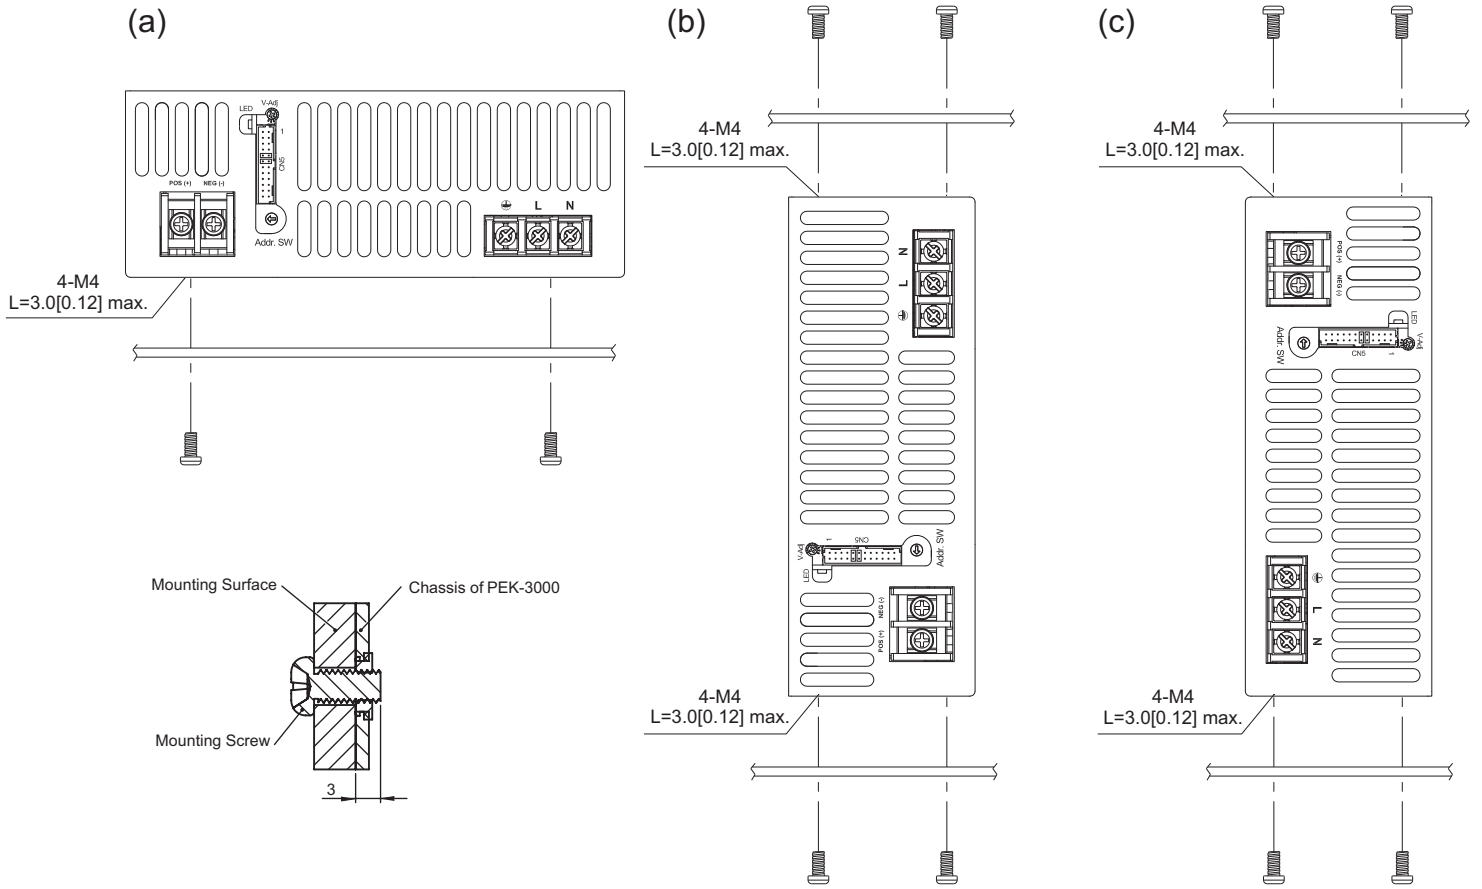

Please connect PAR pins together for current sharing function  
 For Series connection, make sure to isolate CN2 control signals

## Installation Instruction:

### 1. Mounting Directions

1-1 Recommended standard mounting methods:

Recommended screw length is measured from the power supply surface

### 2. Mounting Method

2-1 There are ventilating holes on the front and back side panels, do not obstruct; allow 50mm at least for air flow.

2-2 The Maximum allowable penetration of screw is 3mm. Incomplete threading should not be penetrated.

2-3 Recommended the torque of mounting screw:  
M4 screw: 1.27N · m (13.0kgf · cm)
