SM 1500 with Power Sink Option

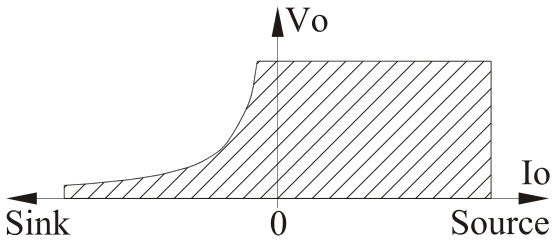
2 Quadrant operation: Source and Sink

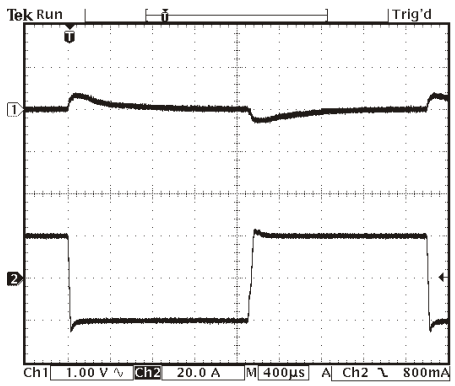
SM52-AR-60

Models	Order Code
SM 15-100	P202
SM 35-45	P203
SM 52-30	P204
SM 52-AR-60	P205
SM 70-22	P206

The power sink option permits the power supply to absorb bursts of power fed back to the unit. An internal module senses the status of power supply and sinks current across the output terminals, thus maintaining a constant output voltage.
The Power Sink Option allows a faster response when the power supply is step programmed to a lower voltage at small load conditions.

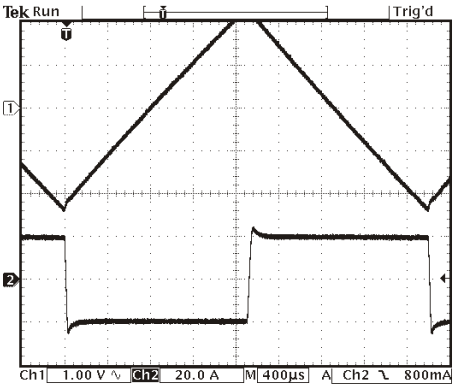
- Can absorb 200 W peak power
- Maintains output voltage setting regardless output power is positive or negative (source and sink)
- Ideal solution for supplying electric motors with PWM-speed control. These systems often return power to the power supply during a braking action
- Ideal solution for ATE systems requiring fast down programming at no load conditions
- Generation Automotive waveforms (fast)





SM35-45 **with** Power Sink Option
Current – 20 A means the load delivers 20 A to the power supply (sink operation)

Upper trace: output voltage
Lower trace: output current
(current switching from +20 A to –20 A at Vo=6 V)



SM35-45 **without** Power Sink Option
*The output voltage is out of control when the output current is **negative***

Upper trace: output voltage
Lower trace: output current
(current switching from +20 A to –20 A at Vo=6 V)

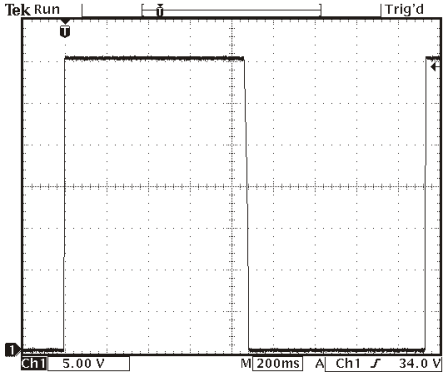
Parallel and Series operation Refer to power sink manual for details and restrictions.	Using multiple units in parallel operation, only one unit can have a power sink. Using multiple units in series operation, all units must have a power sink.				

Notes:
- *The maximum sink current at higher voltages will not be the maximum specified current due to the power limit. For example at 30 V the maximum sink current will only be 6.7 A (30 V x 6.7 A = 200 W = maximum power).*
- *A higher sink current than the maximum current will cause the output voltage to rise.*



SM35-45 **with** Power Sink Option
fast discharge of output capacitors by the power sink circuit
